Introduction. It is said that over 80% of diagnoses are made on history alone, a further 5-10% on examination and the remainder on investigation. [] Whether this adage is true or not may be open to debate but it is clear that history and examination skills remain at the very core of clinical practice.

Health care decisions are complex and involve confronting trade-offs between multiple, often conflicting, objectives. Using structured, explicit approaches to decisions involving multiple criteria can improve the quality of decision making and a set of techniques, known under the collective heading multiple criteria decision analysis (MCDA), are useful for this purpose.

Bacteria and fungi occur as individual, free-floating (planktonic) cells or clustered together in aggregates of cells (biofilms). A microbial biofilm is a structured consortium of microbial cells surrounded by a self-produced polymer matrix™ In addition to microorganisms, components from the host, such as fibrin, platelets or immunoglobulins, may be integrated into the biofilm matrix.
