Statistical mechanics is one of the pillars of modern physics. It is necessary for the fundamental study of any physical system that has a large number of degrees of freedom. The approach is based on statistical methods, probability theory and the microscopic physical laws. It can be used to explain the thermodynamic behaviour of large systems. This branch of statistical mechanics, which ...

Particle physics (also known as high energy physics) is a branch of physics that studies the nature of the particles that constitute matter and radiation. Although the word particle can refer to various types of very small objects (e.g. protons, gas particles, or even household dust), particle physics usually investigates the irreducibly smallest detectable particles and the fundamental ...

Supersymmetry, as theorists realized in the early 1980s, does the trick. It says that for every "fermion" that exists in nature "a particle of matter, such as an electron or quark, that adds to the Higgs mass" there is a supersymmetric "boson," or force-carrying particle, that subtracts from the Higgs mass.

In problems concerning gravity on earth the acceleration ( $a$ ) becomes approximately 9.8 meters per second squared ( $a$ ). An object that starts from rest falls for one second at a speed of 9.8 m/s. After 2 seconds the speed is 19.6 m/s and after 3 seconds it is 29.4 m/s.
