Laboratory quality control is designed to detect, reduce, and correct deficiencies in a laboratory's internal analytical process prior to the release of patient results, in order to improve the quality of the results reported by the laboratory. Quality control is a measure of precision, or how well the measurement system reproduces the same result over time and under varying operating conditions.

Laboratory quality control - Wikipedia

What is being tested? Thiopurine methyltransferase (TPMT) is an enzyme that breaks down (metabolizes) a class of drugs called thiopurines. These drugs are used to suppress the immune system and are prescribed to treat various immune-related conditions or blood disorders (e.g., leukemia).

Anthropometry provides the single most portable, universally applicable, inexpensive and non-invasive technique for assessing the size, proportions and composition of the human body. It reflects both health and nutritional status and predicts performance, health and survival. As such, it is a ...

Physical status: the use and interpretation of anthropometry

Alanine aminotransferase (ALT) is an enzyme found mostly in liver and kidney cells. ALT is released into the blood when the liver is damaged. The ALT blood test is often ordered in conjunction with aspartate aminotransferase (AST) or as part of a liver panel to screen for and/or help diagnose liver disease.

Alanine Aminotransferase (ALT) - Lab Tests Online

Humans get vitamin D from their normal diet, dietary supplements and from exposure to sunlight. 1-5 Ultraviolet B irradiation of the skin drives the conversion of 7-dehydrocholesterol to previtamin D 3, which is then rapidly converted to vitamin D 3. 1 Vitamin D from the skin and diet is further metabolized in the liver to 25-(OH) vitamin D (or calcidiol). 1-5 Calcidiol is the principle ...

High-density lipoproteins (HDL) are one of the five major groups of lipoproteins. Lipoproteins are complex particles composed of multiple proteins which transport all fat molecules around the body within the water outside cells. They are typically composed of 80-100 proteins per particle (organized by one, two or three ApoA; more as the particles enlarge picking up and carrying more fat ...
